Profile Summary

PG-DBDA student with a strong foundation in Big Data Technologies, Machine Learning, and Advanced Analytics. Skilled in Python, SQL, Data Visualization, and building end-to-end data pipelines. Experienced in developing AI-driven systems using deep learning and Retrieval-Augmented Generation (RAG). Passionate about leveraging data engineering and analytics to build scalable, real-world solutions.

Education

Institute for Advanced Computing and Software Development (IACSD), Pune — **2025 - 2026**
PG-DBDA (Post Graduate Diploma in Big Data Analytics)

Vivekanand Education Society's Institute of Technology (VESIT), Mumbai — **2021 - 2025**
B.E. in Artificial Intelligence and Data Science — *62.38%*

Heda Junior College of Science, Washim — **2021**
HSC – Computer Science — *92.83%*

J.D. Chaware Vidya Mandir, Karanja (Lad) — **2019**
SSC — *90.40%*

Projects

NotebookLM-Style Document Intelligence System — **Python, RAG, FAISS, LLMs**

- Built a NotebookLM-style AI system that enables document-grounded question answering, citation-aware responses, and hierarchical summarization over PDFs and text files. Implemented a Retrieval-Augmented Generation (RAG) pipeline using Sentence Transformers, FAISS, and Groq LLMs for low-latency inference.
- GitHub: LLM-project

NeuroTumour AI — **Python, OpenCV, CNNs**

- NeuroTumour AI is a deep-learning project designed to detect, classify, and segment brain tumors using MRI scans. It uses CNN-based models to identify tumor regions, predict tumor type, and assist in early diagnosis. The system processes BraTS dataset images, performs preprocessing with OpenCV, and delivers accurate tumor segmentation for medical analysis.
- GitHub: BE-Project

Cricket Data Analytics — **Python, Pandas, Power BI**

- A data-driven project where I scraped cricket match data using Python, cleaned and processed it with Pandas, and built Power BI dashboards to analyze player performance, match trends, and team strategies. The project highlights insights such as top scorers, wicket-takers, venue impact, and game-winning factors.
- GitHub: Cricket-data-analytics

Technical Skills

- **Programming**: Python, Java
- **Big Data**: Spark, Hive, Kafka
- **Databases**: MySQL
- **Machine Learning**: Supervised Learning, Unsupervised Learning, CNNs, NLP, Retrieval-Augmented Generation (RAG)

Certifications

- **Fundamentals of Deep Learning** – Nvidia
- **Applications of AI for Predictive Maintenance** – Nvidia
- **Applications of AI for Anomaly Detection** – Nvidia
