Hiring Manager

Machine Learning & AI Team

Capgemini

## Re: Application for Machine Learning Professional Role — Capgemini

Dear Hiring Manager,

I am writing to apply for the Machine Learning Professional role at Capgemini. With a background in Artificial Intelligence and Data Science, ongoing specialization in Big Data Analytics, and hands-on experience designing and implementing intelligent systems across NLP, deep learning, and Generative AI, I bring the deep technical knowledge and solution-design mindset your role demands. I am excited by the opportunity to help Capgemini's clients navigate the evolving AI landscape and deliver machine learning projects that create measurable business impact.

Applying machine learning techniques to solve complex problems is at the core of everything I have built. I independently designed a full-stack LLM-Powered Document Intelligence System using Retrieval-Augmented Generation (RAG) — integrating document chunking, sentence transformer embeddings, and FAISS vector indexing to enable intelligent question answering over unstructured data. This project required algorithm selection, system architecture design, and iterative performance tuning to arrive at a production-ready solution — reflecting exactly the end-to-end solution design and successful implementation Capgemini prioritizes for its clients.

I understand that great ML solutions do not end at model training. For my Brain Tumor Detection project, I managed the complete model lifecycle — training and optimizing CNN and U-Net architectures on 20,000+ MRI slices, rigorously evaluating performance, and preparing models for deployment in a production-oriented workflow. This experience gave me a strong foundation in testing, deploying, and monitoring ML models in production environments. I complement this with NVIDIA certifications in deep learning, predictive maintenance AI, and anomaly detection — all grounded in real-world deployment and monitoring contexts.

My training in Big Data Technologies — Apache Spark, Kafka, Hive, and ETL pipelines — means I can work effectively across the full data and ML stack. I have also demonstrated the

ability to drive business impact through data storytelling, having built pipelines and interactive dashboards that transformed 5,000+ records into actionable stakeholder insights. I am comfortable collaborating with cross-functional teams, communicating complex findings clearly, and tailoring solutions to specific client needs — qualities central to Capgemini's consulting and delivery model.

I am genuinely excited about the prospect of contributing to Capgemini's AI practice and helping clients unlock value through intelligent systems. I would welcome the opportunity to discuss how my skills and approach align with your team's goals.

Thank you for your time and consideration. I look forward to hearing from you.

Sincerely,

**Rohit Kshatriya**
